Office Action Summary

Applicant(s)

09/749,798

Applicant(s)

DONALDSON ET AL.

Examiner

Cindy Nguyen

Art Unit

2171

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 January 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 28 December 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 18 6) ☐ Other:

Art Unit: 2171

DETAILED ACTION

This is in response to amendment filed 01/21/04.

1. *Information Disclosure Statement*

The information disclosure statement filed on 01/16/04 is in compliance with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609. Because they have been placed in the application file, and the information referred to therein has been considered as to the merits.

2. *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. *Claims 1-3, 5 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beall (U.S 6321224) in view of Snow et al. (U.S 6098066) (Snow).*

Regarding claims 1 and 16, Beall disclose: A method and a system for searching different data stores based on a classification of a search term, the method comprising:

receiving at least one search term (col. 4, lines 60 to col. 5, lines 2, Beall);

classifying the search term among at least first and second categories (col. 5, lines 6-15, Beall);

when the search term is classified within the first category, performing the search after classifying the search term by comparing the search term only to the first electronic information

Art Unit: 2171

within the first electronic information store to determine whether matches exist (col. 6, lines 25-64, Beall);

displaying a result based on the matches that are determined to exist (col. 9, lines 47-59, Beall);

using the classification of the search term to select among multiple electronic information stores to perform a search, wherein a first electronic information store contains first electronic information associated with at least a first category and second electronic information store contains second electronic information associated with at least a second category

However, Beall didn't disclose: using the classification of the search term to select among multiple electronic information stores to perform a search, wherein a first electronic information store contains first electronic information associated with at least a first category and second electronic information store contains second electronic information associated with at least a second category ; when the search term is classified within the second category and following the classification of the search term, performing the search by comparing the search term to at least second electronic information within at least a second electronic information store that differs from the first electronic information store to determine whether matches exist. On the other hand, Russell disclose: using the classification of the search term to select among multiple electronic information stores to perform a search, wherein a first electronic information store contains first electronic information associated with at least a first category and second electronic information store contains second electronic information associated with at least a second category (col. 8, lines 9-48, Snow); when the search term is classified within the second and following the classification of the search term, performing the search by category comparing

Art Unit: 2171

the search term to at least second electronic information within at least a second electronic information store that differs from the first electronic information store to determine whether matches exist (col. 7, lines 54 to col. 8, lines 25, Snow). Thus, at the time invention was made, it would have been obvious to a person of ordinary skill in the art to include the steps to compare the second electronic information store in the system of Beall as taught by Snow. The motivation being to enable the user selected category to provide a more limited search. (col. 7, lines 55-66, Snow).

Regarding claim 2, all the limitations of this claim have been noted in the rejection of claim 1. In addition, Beall/Snow discloses: wherein comparing the search term when the search term is classified within the second category comprises comparing the search term to the first electronic information within the first electronic information store (col. 8, lines 9-48, Snow) and to the second electronic information within the second electronic information store (col. 8, lines 9-48, Snow).

Regarding claim 3, all the limitations of this claim have been noted in the rejection of claim 1. In addition, Beall/Snow discloses: wherein: receiving at least one search term comprises receiving several search terms and grouping the search terms received as a single string (col. 4, lines 60 to col. 5, lines 2, Beall);

classifying the search term comprises classifying the single string of search terms among at least first and second categories (col. 5, lines 5-15, Beall);

comparing the search term when the single string of search terms is classified within the first category comprises comparing the single string of search terms to the first electronic

Art Unit: 2171

information within the first electronic information store to determine whether matches exist (col. 5, lines 15-30, Beall); and

comparing the search term when the single string of search terms is classified within the second category comprises comparing the single string of search terms to the second electronic information within the second electronic information store to determine whether matches exist (col. 6, lines 65 to col. 7, lines 41, Beall).

Regarding claim 5, all the limitations of this claim have been noted in the rejection of claim 1. In addition, Beall/Snow discloses: wherein the method is performed by a web host having members and the method further comprises:

automatically scanning contents of a web site when the web site is accessed by members of the web host (col. 3, line 26-58, Beall);

classifying the contents of the web site among at least one of the first electronic information within the first electronic information store and the second electronic information within the second electronic information store (col. 6, lines 7-14, Snow);

storing the contents of the web site in the first electronic information within the first electronic information store when the contents of the web site are classified among the first electronic information (col. 7, lines 59-65, Beall); and

storing the contents of the web site in the second electronic information within the second electronic information store when the contents of the web site are classified among the second electronic information (col. 6, lines 15-44, Snow). Thus, at the time invention was made, it would have been obvious to a person of ordinary skill in the art to include the step of storing the contents of the web site in the system of Beall as taught by Snow. The motivation being to

Art Unit: 2171

enable users to store the classified information in separate database for managing data in storages.

4. Claims 4, 6-15, 17-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beall (U.S 6321224) in view of Snow et al. (U.S 6098066) (Snow) and further in view of Russell-Falla et al. (U.S 6266664) (Russell).

Regarding claim 4, all the limitations of this claim have been noted in the rejection of claim 1. In addition, Beall/Snow discloses: wherein the first electronic information includes contents relating to non-offensive web sites (col. 7, lines 59-65, Beall); However, Beall/Snow didn't disclose: the second electronic information includes contents relating to offensive web sites. On the other hand, Russell discloses: the second electronic information includes contents relating to offensive web sites (col. 5, lines 9-20, Russell). Thus, at the time invention was made, it would have been obvious to a person of ordinary skill in the art to include the offensive web sites in the combination system of Beall/Snow as taught by Russell. The motivation being to screen for offensive materials from web sites.

Regarding claims 6 and 15, all the limitations of these claims have been noted in the rejection of claims 5 and 14. In addition, Beall/Snow/Russell disclose: wherein the first electronic information store is located on a first server (12, fig. 1, Beall) and the second electronic information store is located on a second server that differs from the first server (10, fig. 1 and corresponding text, Russell). Thus, at the time invention was made, it would have been obvious to a person of ordinary skill in the art to include more than one server that differs from the first server in the system of Beall as taught by Russell. The motivation being to enable

Art Unit: 2171

users to store classify information in different database server for easy to control the data in network system.

Regarding claim 14, Beall/Russell disclose: A system for storing searchable and retrievable content among more than one distinct electronic information store, comprising:

a first electronic information store having at least a first type of searchable and retrievable content that includes searchable and retrievable content that has been classified as non-offensive(col. 10, lines 40-61, Beall); and

a second electronic information store having at least a second type of searchable and retrievable content that includes searchable and retrievable content that has been classified as offensive (col. 4, lines 61 to col. 5, lines 19, Russell), wherein the first electronic information store is at least logically distinct from the second electronic information store to enable controls over access to the searchable and retrievable content included within the first electronic information store and the second electronic information store (col. 2, lines 63 to col. 3, lines 9, Russell). Thus, at the time invention was made, it would have been obvious to a person of ordinary skill in the art to include the step to classify as offensive data information and control the user access to the offensive web page in the system of Beall as taught by Russell. The motivation being to query the difference kind of information store in the databases and help the users control over web page content offensive data displayed to their children.

Regarding claims 7 and 8, all the limitations of this claim have been noted in the rejection of claim 1. In addition, Beall/Snow wherein the first and the second electronic information includes full text, titles, descriptions (fig. 3, Beall), and addresses of web sites such that the comparing the search term to the first electronic information within the first electronic

Art Unit: 2171

information store comprises comparing the search term to the full text, the titles, the descriptions (fig. 3, Beall). However, Beall/Snow didn't disclose: the addresses of web sites to determine whether matches exist. On the other hand, Belfiore disclose: the addresses of web sites to determine whether matches exist (col. 5, lines 66 to col. 6, lines 35, Russell). Thus, at the time invention was made, it would have been obvious to a person of ordinary skill in the art to include the step of comparing the search term to the addresses of web sites to determine whether matches exist in the combination system of Beall/Snow as taught by Russell. The motivation being to enable users to choose the most relevant hits without the loss of information.

Regarding claims 9 and 19, all the limitations of these claims have been noted in the rejection of claims 1 and 5. It is therefore rejected as set forth above. In addition, Beall/Snow/Russell discloses: detecting a number of accesses of the searchable and retrievable content (col. 2, lines 63 to col. 3, lines 9, Russell); comparing the number of detected accesses to a threshold number (col. 3, lines 10-30, Russell); if the threshold number is met, scanning the searchable and retrievable content in response to the searchable and retrievable content being accessed the threshold number of times (col. 7, lines 50 to col. 8, lines 3, Russell). Thus, at the time invention was made, it would have been obvious to a person of ordinary skill in the art to include the steps for detecting and scanning the contents being accessed the threshold number of times in the combination system of Beall/Snow as taught by Russell. The motivation being to query the different kind of information store in the databases and help the users control over web page content offensive data displayed to their children.

Regarding claim 10, all the limitations of this claim have been noted in the rejection of claim 9. In addition, Beall/Snow/Russell disclose: wherein the classifying is based on searchable and retrievable content received from a listing service (col. 2, lines 63 to col. 3, lines 9, Russell).

Regarding claim 11, all the limitations of this claim have been noted in the rejection of claim 9. In addition, Beall/Snow/Russell disclose: wherein the classifying is based on searchable and retrievable the content itself (col. 6, lines 4-32, Beall).

Regarding claim 12, all the limitations of this claim have been noted in the rejection of claim 9. In addition, Beall/Russell disclose: wherein the first electronic information store includes non-offensive searchable and retrievable content (30, fig. 3, Beall).

Regarding claim 13, all the limitations of this claim have been noted in the rejection of claim 12. In addition, Beall/Snow/Russell disclose: wherein the second electronic information store includes offensive searchable and retrievable content (col. 5, lines 47-64, Russell). Thus, at the time invention was made, it would have been obvious to a person of ordinary skill in the art to include the second electronic information store includes offensive searchable and retrievable content in the combination system of Beall/Snow as taught by Russell. The motivation being to query the difference kind of information store in the databases and help the users control over web page content offensive data displayed to their children.

Regarding claims 17 and 20, all the limitations of these claims have been noted in the rejection of claims 16 and 19, respectively. In addition, Beall/Snow/Russell discloses: wherein the computer readable medium comprises a propagated signal (col. 8, lines 11-20, Russell). Thus, at the time invention was made, it would have been obvious to a person of ordinary skill in the art to include a propagated signal in the system of Beall as taught by Russell. The motivation

Art Unit: 2171

being to use the signal to provide the instructions to process information in search and retrieval system.

Regarding claims 18 and 21, all the limitations of these claims have been noted in the rejection of claims 17 and 20, respectively. In addition, Beall/Snow/Russell discloses: wherein the propagated signal comprises a carrier wave (col. 8, lines 11-20, Russell).

Response to Arguments (01/21/04)

Applicant's arguments have been considered, but are moot in view of the new ground(s) of rejection.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 2171

5. Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cindy Nguyen whose telephone number is 703-305-4698. The examiner can normally be reached on M-F: 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Safet Metjahic can be reached on 703-308-1436. The fax phone numbers for the organization where this application or proceeding is assigned are 703-746-7239 for regular communications and 703-746-7240 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.
